Airand · Business analysis case study

Wireframes

Nine screens across four products: the admin console, the vendor app, the cyclist app and the receiver status page. Each screen is traced to the functional requirements (FR) and user stories (US) in the Software Requirements Specification.

Mid-fidelity, interactive prototypes. All names, numbers and businesses are simulated for a portfolio case study.

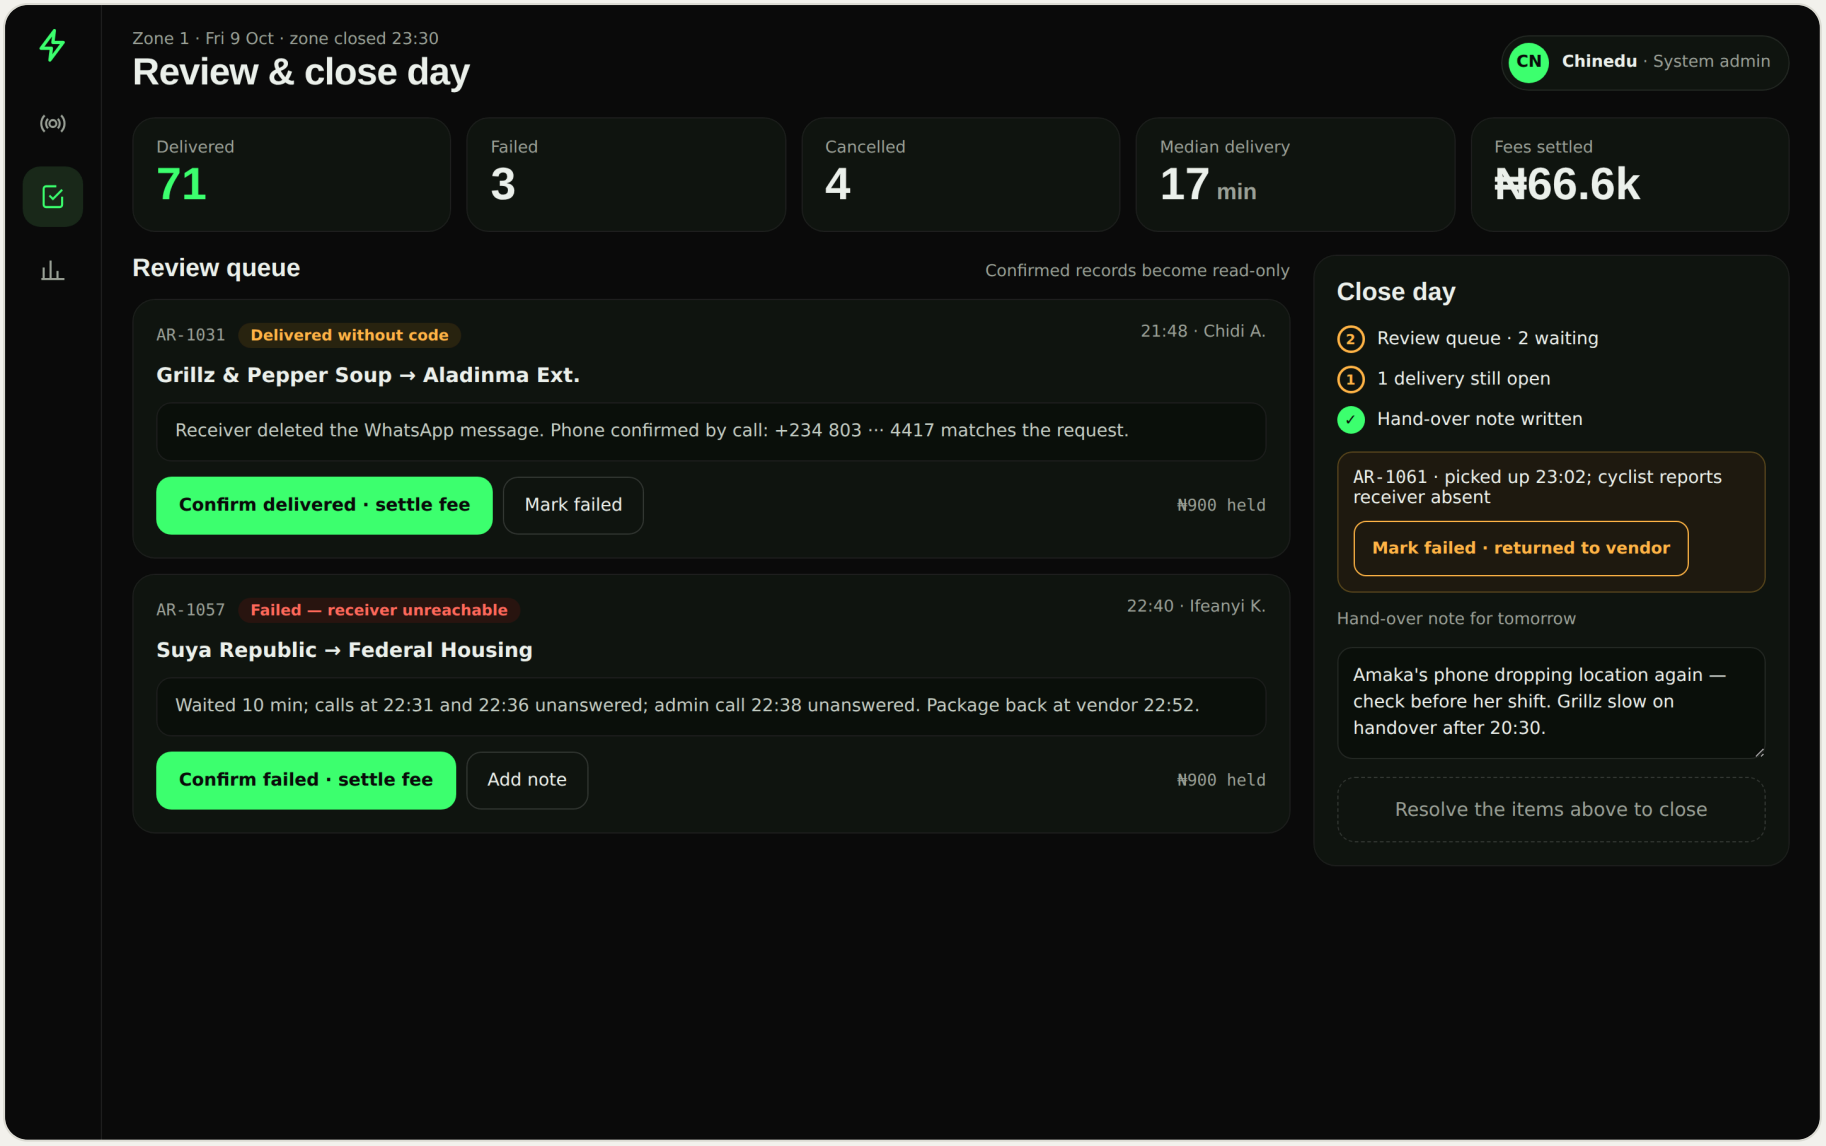

Chinedu Egbuna · enayds.github.io · October 2026

WF-01 · Admin console: live board

The system admin (Chinedu) watches the zone: deliveries in motion by state, alerts with one-click fixes, cyclists and their status, a zone pulse and a suggested next action. Board and map views share the same data.

Satisfies FR-15, 16, 18, 23, 28, 46, 47, 51 · US-10, 11, 13, 17, 27, 28, 37

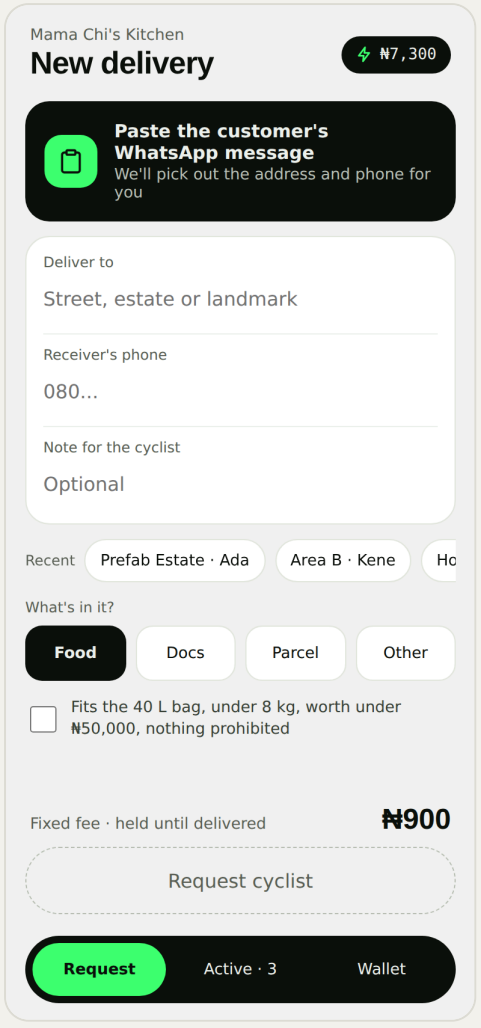

WF-02 · Admin console: review and close day

Deliveries closed without a code and failed deliveries wait here for confirmation; the day cannot close while anything is unresolved.

Satisfies FR-25, 26, 27, 48 · US-20, 30, 31

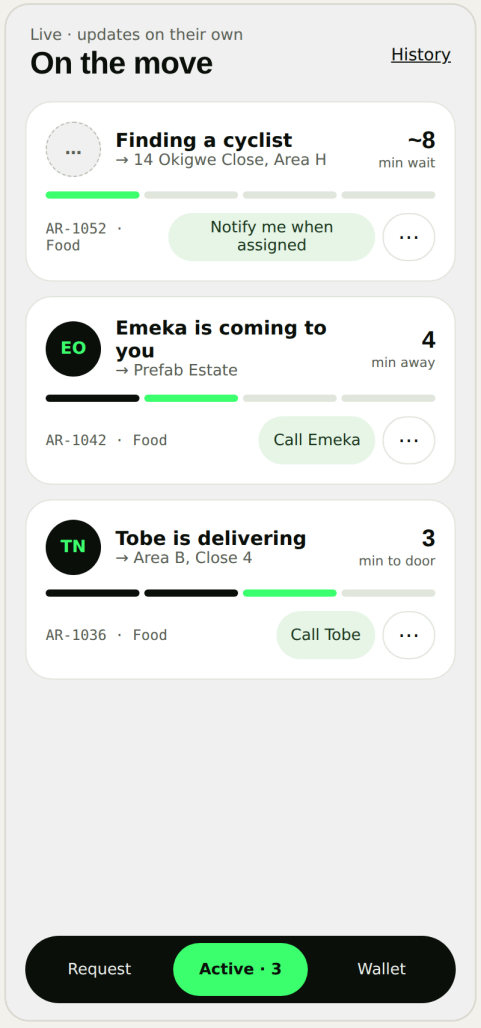

Vendor app (progressive web app)

WF-03 · Vendor app: request a delivery

Paste the customer's WhatsApp message to fill the address and phone, pick a package category, confirm the limits, and pay the fixed ₦900, held until delivery.

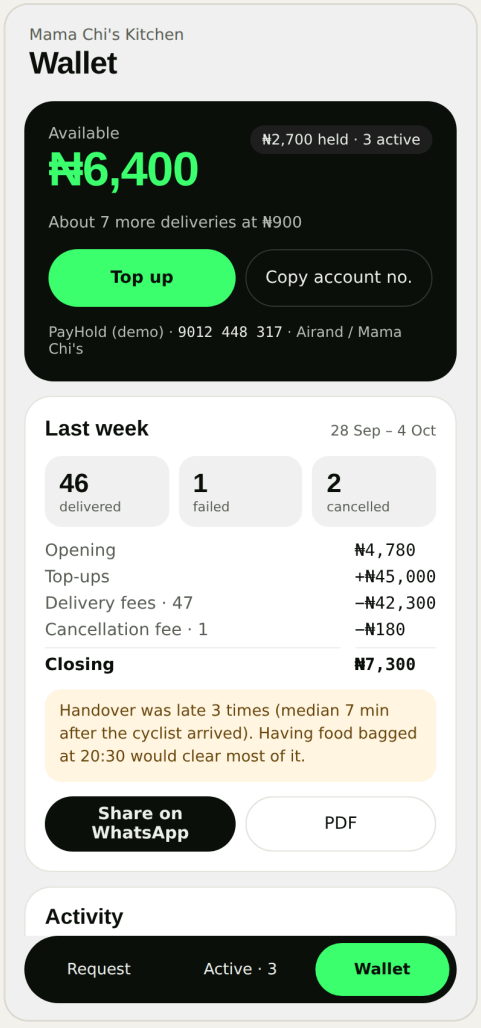

Satisfies FR-01–07, 30, 31, 52 · US-01, 02, 03, 04, 38

WF-04 · Vendor app: deliveries on the move

Live status for each delivery, and a cancel sheet that shows the refund before the vendor confirms: full refund, ₦180 fee, or no cancellation after pickup.

Satisfies FR-10, 32, 36 · US-07, 32

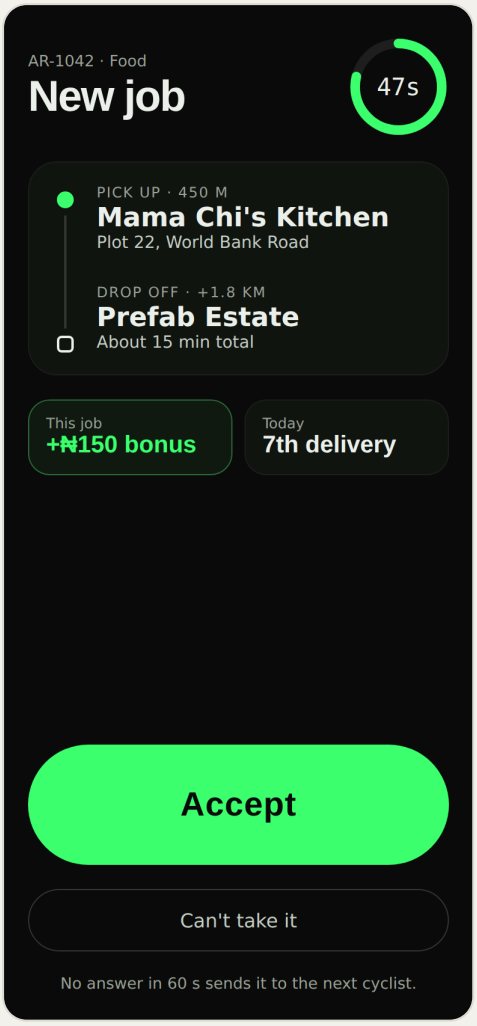

WF-05 · Vendor app: wallet and weekly statement

Available and held balance, top-up details, and the weekly statement with a note on handover delays.

Satisfies FR-11, 33, 34, 35 · US-05, 33, 34

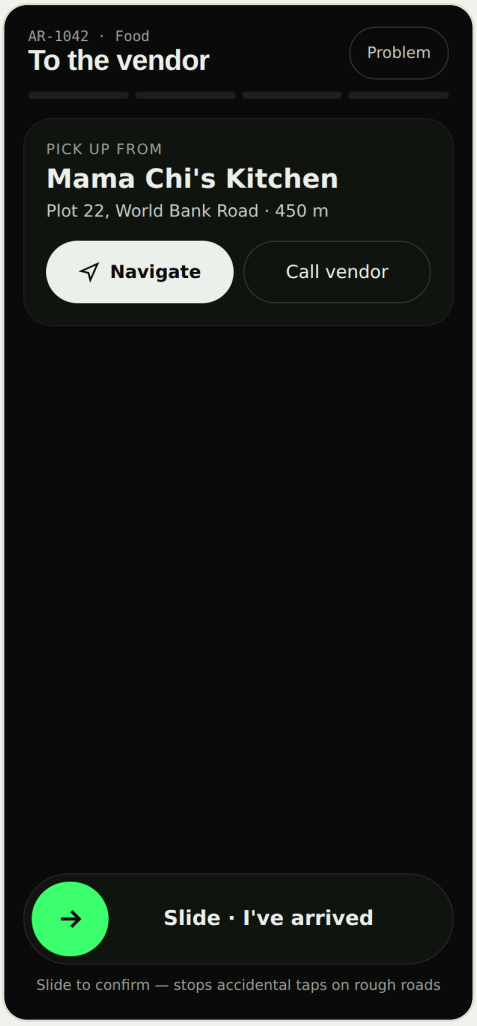

Cyclist app (native Android)

WF-06 · Cyclist app: new job

A full-screen offer with route, earnings and a 60-second countdown; no answer passes the job to the next cyclist.

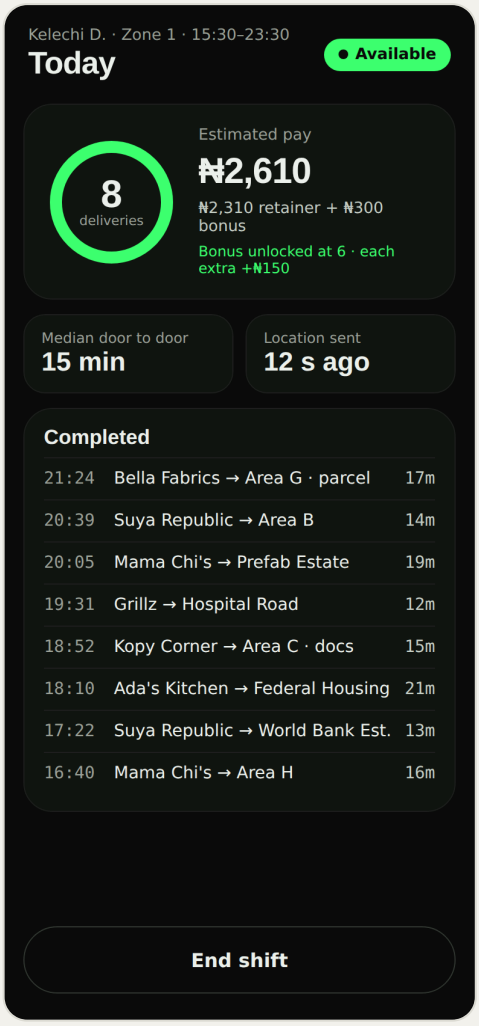

Satisfies FR-14, 15, 42 · US-09, 14

WF-07 · Cyclist app: current job

One action at a time, confirmed by sliding so a bump in the road cannot record a pickup; the receiver's code closes the delivery.

Satisfies FR-22–26, 43, 53 · US-15, 16, 18, 19, 20

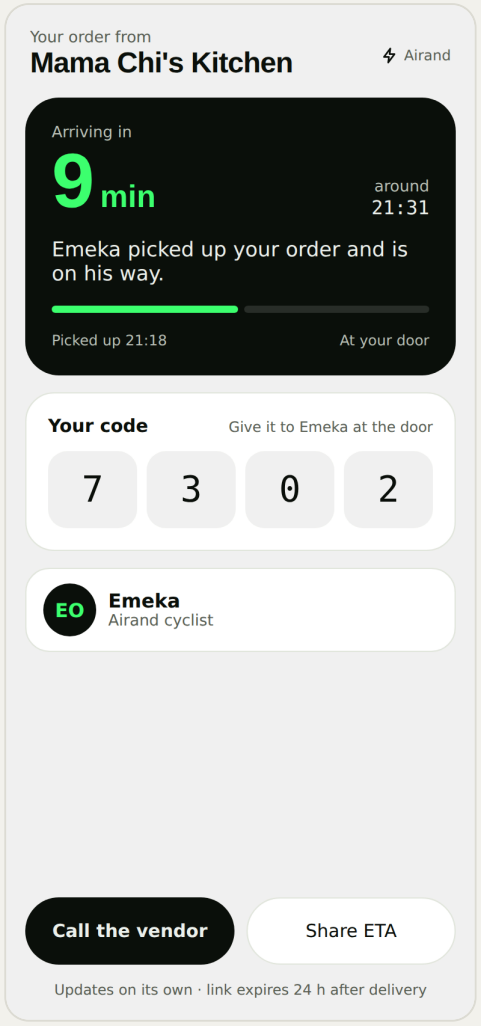

WF-08 · Cyclist app: today

Deliveries completed, estimated pay (retainer plus bonus) and shift controls.

Satisfies FR-41, 45 · US-22, 23

Receiver status page (web link, no login)

WF-09 · Receiver status page

No login. The receiver sees only when the order was picked up and when it arrives, plus their code.

Satisfies FR-21, 38, 39, 40 · US-24, 25, 26
